Project Profile

SE 60th St. Sidewalk Improvement

Owner: City of Bellevue

Contractor: Merlino Bros

Completion Date: August 2007

This project was the final link connecting pedestrian access to either side of this unimproved area. The project entailed building a gravity wall to stabilize approximately 120' of embankment to allow construction of the curb and sidewalk. The wall was constructed from Stone Strong System precast concrete blocks measuring 8' long x 3' high and weighing just under 6,000 pounds each. This was the first application of the Stone Strong System in Washington State.

**24" - 144" Manholes • Catch Basins • Arches • Box Culverts
Precast Bridge Structures • MSE Septic Tanks • Retaining Walls
Funeral Vaults • Water Storage Tanks • Concrete Pipe and more...**
